RIGHTFAX CONNECTOR

CONSOLIDATED
FAXING

HARNESS THE POWER OF YOUR RIGHTFAX SERVER FROM YOUR MFP.

KYOCERA'S RIGHTFAX CONNECTOR HELPS AUTOMATE FAX COMMUNICATIONS BY CONSOLIDATING ALL FAX FUNCTIONALITY TO YOUR MFP'S CONTROL PANEL.

Many paper-intensive industries such as healthcare and financial services, rely upon fax as an essential component of their daily workflow. Its ability to provide an end-to-end audit trail makes fax an invaluable tool for the security and compliance requirements these highly regulated industries are tasked with. For large businesses in particular, a scalable, enterprise fax solution is essential to maximize productivity and cost-savings not achievable with standalone devices. KYOCERA's RightFax Connector can help your organization meet these challenges by harnessing the power of your KYOCERA MFPs and your OpenText® RightFax Server to create a fully integrated solution.

RightFax technology will enable you to consolidate all fax services on the network, providing convenient access to faxing capabilities on the same devices used daily for printing, scanning and copying. With KYOCERA's RightFax Connector, users can send faxes through the RightFax server directly from their HyPAS-enabled KYOCERA MFP. All fax functionality and RightFax features are seamlessly consolidated to the MFP touch screen control panel. Users can access standard fax capabilities, as well as advanced features including personal phone books, billing codes, cover pages, secure docs and more. Additionally, the Connector offers IT administrators several deployment options for setting up MFPs on the network to work seamlessly with existing RightFax servers.

The RightFax Connector supports all the security features of the RightFax Server and your MFP, enabling your business to adhere to confidentiality and compliance requirements.
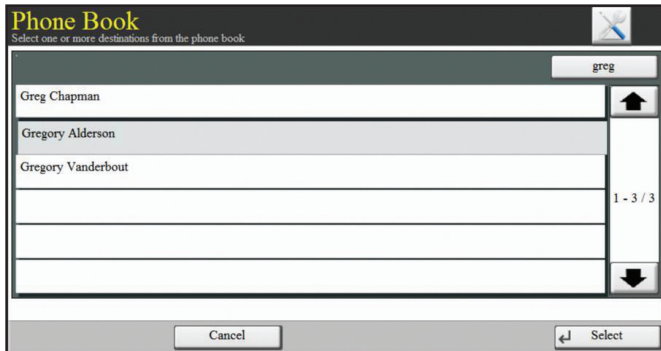

For businesses who depend on fax as part of their daily workflow, KYOCERA's RightFax Connector can help you increase productivity and compliance. Harnessing the power of your MFP and OpenText® RightFax Server, it creates a fully integrated and secure solution.

› Increase productivity by enabling users to fax directly from their MFP
› Speed document delivery through seamless integration with your existing business workflow
› Facilitate compliance through secure document management, delivery and audit trail

KYOCERA
Document Solutions

HyPAS®

KYOCERA's HyPAS (Hybrid Platform for Advanced Solutions) is a powerful and scalable software solution platform. Through direct enhancement of the MFP's core capabilities, to the integration with widely accepted software applications, HyPAS will enhance your specific document imaging needs, resulting in improved information sharing, resource optimization and document workflows.

Users can quickly access their RightFax personal phone book from the MFP control panel

SYSTEM REQUIREMENTS

› Supports RightFax version 9.0 through 10.6
› Server-based licensing
› Compatible with KYOCERA HyPAS-enabled and HyPAS-capable MFPs

KYOCERA RIGHTFAX CONNECTOR BENEFITS

In order to thrive in an increasingly competitive and highly regulated marketplace, today's large businesses must improve employee productivity and reduce operating costs, while maximizing security and compliance.

› Access RightFax's fax features and functionality from the MFP's intuitive, easy-to-navigate user interface
› Walk-up fax capability directly at the MFP control panel through the OpenText® RightFax Server
› Fax to multiple destinations with ease
› Store a user-specific cover page for an added professional touch
› An invaluable compliance tool that retains an audit trail of all fax communication
› Eliminate security risks by leveraging both the RightFax and your MFP's built-in security features

HOW IT WORKS

KYOCERA RightFax Connector allows users to send faxes through the OpenText® RightFax Server, directly from the control panel of a KYOCERA MFP. Documents scanned at the MFP are transmitted to the Connector, which submits fax jobs in RightFax server's outbound queue.

The Connector provides two methods of accessing the RightFax Server: *Walkup*, where users are not required to enter a username and password, or *Login*, where users enter login information directly to the soft keyboard. Selection of the Login process enables users to access their personal phone book, eliminating the need to manually enter a recipient destination, which is particularly helpful when sending to multiple locations.

Intuitive screen prompts enable users to access fax settings, select their cover page and configure scan settings. Once documents are in position, they are then quickly scanned and sent.
